Patient editor

Patient list

After choosing a patient from patient list, it is possible to either select the patient, edit the patient information or delete the patient.

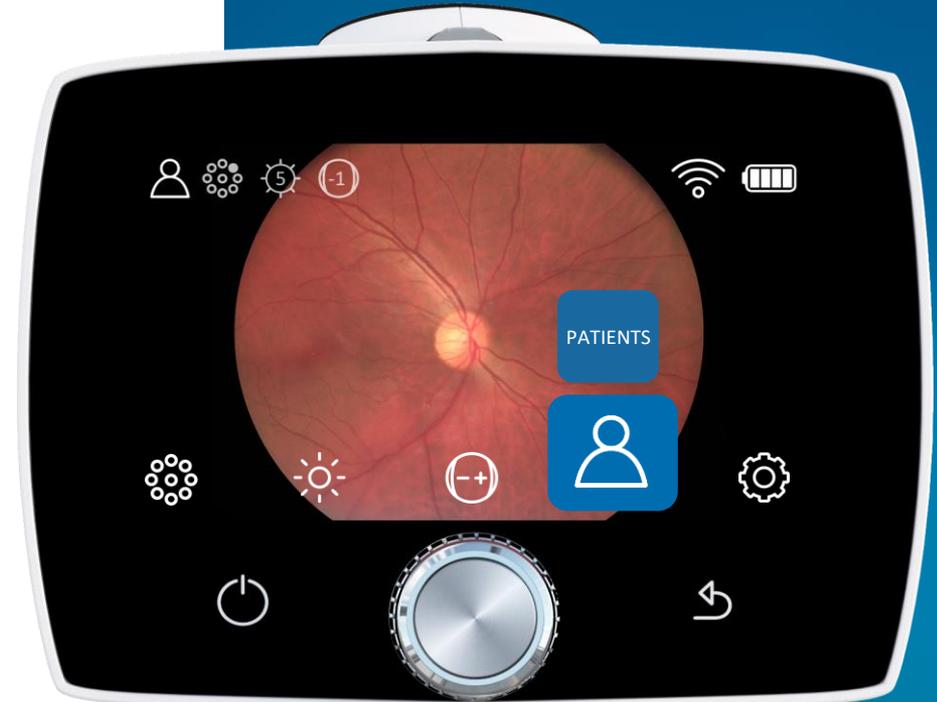

New anonym patient

New patient folder is recommended to create for each patient. If the current patient folder is empty a new folder cannot be created. Select '*New anonymous patient*' setting by pressing Optoroller to create a new patient folder.

Image preview

Select '*Preview images*' setting by pressing Optoroller to preview captured images. The latest image will be shown. To change image, first choose the patient from the folder list and then the captured image from the study list. When captured image is shown, image can be zoomed by pressing Optoroller.

Focus window

Optomed Aurora Anterior Module has 5 focus windows for the user to focus image on different areas during imaging.

Advanced menu

To change Camera or Optics specific settings select settings option by pressing Optoroller
